The PSMA-like gene is mapped to chromosome 11q14.3, to the schizophrenia disorder type II locus. Antibodies directed against PSMA-like protein are useful for diagnosing cancers (prostate, bladder, pancreatic, sarcoma, melanoma, lung or kidney) or neurological disorders such as schizophrenia. They may also be used for screening for ligands of PSMA-like protein and imaging cells expressing PSMA-like protein.

                                                                              AAQ65520 encodes a prostrate specific membrane antigen (PSM, AAR55097). The PSM coding sequence is useful for suppressing or modulating the metastatic ability of prostate tumour cells to grow, or for eliminating them. The protein is useful to identify or purify ligands of the Ag. It is also an attractive target for Ab-directed imaging and targeting of prostatic tumour deposits.

comprising implanting vascular cells into an immundeficient manual, establishing an immune response in the mammal, and assaying a characteristic to determine cell-mediated immunity in the mammal. The methods and compositions of the present invention are useful for the generation of a cellular immune response, in particular a CTL response, for treatment directly against a tumour neovasculature. They can also be used for making research models targeting tumour neovasculature. The present invention using the anti-angiogenesis approach takes advantage of the need of tumours to recruit a blood supply to support their continued growth. This approach aims to disrupt a tumour's supply of nutrients to cause it to die or at least limit its growth. This sequence represents a DNA associated with the neo-vascularure preparation for treatment of cancer described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Evaluating cell-mediated immunity, in particular cytotoxic {\tt T} lymphocyte responses, by implanting vascular cells, useful for treatment and research models for directly targeting tumor neovasculature -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (CTLI-) CTL IMMUNOTHERAPIES

CC response against a cell comprising a target antigen (I) in a subject, CC treating a subject having undesired cells, for example tumour cells CC or virally infected cells (C), reducing the number of (C) in a subject, CC and stimulating presentation of (I) by a cell. This is done by CC administering a polynucleotide (II) exocding a variant of (I), so that CC (II) expressed in a cell and cell-mediated immune response is induced. The method can be used to treat prostate cancer, breast cancer, Colorectal cancer and pancreatic cancer, as well as lymphomas and CC leukaemias. The method is also useful in treating chronic viral CC infections such as those caused by hepadnaviruses, lentiviruses and the CC including human immunodeficiency virus (HIV), herpesviruses and the Sequence of human prostate specific membrane antigen (PSMA) variant which has the signal sequence deleted, used as a target antigen in the

coding

Example 1;

                                                                                                                                                                                                                                                                                                                                 QY
                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of diagnosing (I) the onset or CC progression of benign prostatic hyperplasia (BPH), or screening (II) for CC or identifying an agent that modulates the onset or progression of BPH. CC The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate CC hyperplasia as compared to normal prostate tissue. (I) comprises CC detecting the expression levels of one or more genes in prostate cells (II) comprises preparing a first gene expression profile CC of BPH cells or BPH-like cell population, exposing the cells to the CC agent, preparing a second gene expression profile of the agent exposed CC cells, and comparing the first and second gene expression of BPH. (II) is ceful for identifying an agent that modulates the onset or progression CC of BPH. The methods are useful to present information identifying CC the expression level in a tissue or cells, by comparing the expression clevel of genes given in the specification in the tissue or cells to the CC level of genes given in the specification in the tissue or cells to the CC level of expression of gene in the database, and displaying the CC treating BPH or prostate cancer. ABK64106-ABK64860 represent human CC benign prostatic hyperplasia gene sequences of the invention.

                                                                                                                                                                                anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, peschhangal cyarian vidney.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening for anti-neoplastic agent involves exposing cells to chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature generation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID 8007; 44pp;

The present invention describes an isolated epitope (I) and an epitocluster. Also described is a vaccine or immunotherapeutic composit: (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunogenicity of a vaccine or immunotherapeutic composition, by

```
a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

CC (a) assessing whether a patient is afflicted with prostate cancer;

CC (b) monitoring the progression of prostate cancer in a patient;

CC (c) assessing the efficacy of a test compound to inhibit prostate

CC (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

CC (e) assessing the efficacy of a therapy for inhibiting prostate cancer

CC (f) assessing the prostate cell carcino-

CC (g) determining whether normal carcino-

CC (h) assessing the prostate cell carcino-

The invention relates to an isolated nucleic acid molecule (I) a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) c specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancel (b) monitoring the progression of prostate cancer in a patient.
                                                                                                                             Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; prostate pharmacogenomic
                                                                                                   Claim
                                                                                                                                                                                                                                                                                                                                                                     17-FEB-2000;

                                                                                                                                                 A cDNA clone (AAT36785) codes for human 100 kDa prostate-specific membrane (PSM) antigen (AAW02234), an integral membrane glycoprotein that is very highly expressed in prostatic tumours and metastases. It was obtd. from lymph node carcinoma of prostate (LNCaP) cell mRNA by PCR amplification (see also AAT36795-808) and screening of an LNCaP cDNA library using an amplified cDNA partial clone as probe. The cDNA can be used to provide <u>Drobes</u> and primers useful e.g. in detecting hematogenous micrometastatic tumour cells and determining prostate cancer progression (see also AAT36827-30 and AAT36813-18), and in gene therapy. An alternatively spliced PSM, PSM', has a shorter cDNA sequence. PSM genomic DNA is given in AAT36786.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Key

                                                                                                                                     AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ashkenazi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be closed to stimulate tumour necrosis factor (TWR) alpha release from human CC subjects can be used to determine the presence of tumours and also CC susceptibility to tumour development, particularly adrenal, lung, colon, colonsets, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids con be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

```

```
FUNCTION: Has both folate hydrolase and N-acetylated-alpha-linked-acidic dipeptidase (NAALADase) activity. Has a preference for trial-alpha-glutamate peptides. In the intestine, required for the uptake of folate. In the brain, modulates excitatory neurotransmission through the hydrolysis of the neuropeptide, N-aceylaspartylglutamate (NAAG), thereby releasing glutamate. Stable at pH greater than 6.5. Isoforms PSM-4 and PSM-5 would appear to be physiologically irrelevant. Involved in prostate tumor
```

progression.
-!- FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity.
-!- CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal
glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.
-!- COFACTOR: Zinc; Binds two ions per subunit. Required for NAALADase

NAAG, quisqualic acid, 2-(phosphonomethyl) penti (PMPA) and EDTA. Activated by cobalt. SUBCELLULAR LOCATION: Type II membrane protein. The PSMA' isoform is cytoplasmic. ENZYME REGULATION: The NAALADase activity activity 2-(phosphonomethyl) pentanedioic S. inhibited by beta-

Plasma membrane

Name=PSMA IsoId=Q04609-6; Sequence=VSP_005336;

Expressed specifically in jejunum brush border membranes. In the brain, highly expressed in the ventral striatum and brain stem. If the prostate, the PSMA, cytosolic isoform is the most abundant form in normal tissue, the membrane-bound PSMA-1 form in primary prostate tumors. The PSMA-2 isoform also found in normal prostate as well as in brain and liver.

INDUCTION: In the prostate, up-regulated in response to androgen colon and the capillary endothelium of a variety of tunors. Expressed specifically in jejunum brush border membranes. expressed, TISSUE SPECIFICITY: CIFICITY: Highly expressed in prostate epithelium. in the small intestine, brain, kidney, liver, spl spleen, prostate Also

cardiovascular disease, neural tube defects,

MISCELLANEOUS: PSMA is used as a diagnostic and prognostic indicator of prostate cancer, and as a possible marker for neurological disorders such as schizophrenia, Alzheimer's of the control of the con disease various

and Huntington's disease.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.

Maximal activity at pH 6.0. FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity (By similarity). In vitro, cleaves Gly-Pro-AMC (By similarity). CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         jejunum brush-border membrane. Weak expression DOMAIN: The NAALADase activity is found in the dipeptidyl peptidase IV type activity in the C-SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              glutamyl residue COFACTOR: Zinc;

Name=3; Synonyms=Long form;
IsoId=P70627-3; Sequence=Not described;
IsoId=P70627-3; Sequence of the hippocampus, dentate gyrus, priform cortex, choroid plexus of venticles, pineal gland, anterior lobe of the pituitary gland and supraoptic nucleus. High levels also found in the cerebral cortex, substantia nigra, pontine nucleus and the granule cell layer of cerebellum. Highly expressed in astrocytes and non-myelinating Schwann cells. Also expressed in kidney, localizing to the proximal brush border of the renal tube.

-i- DOMAIN: The NAALADase activity is found in the central region, the dipeptidyl peptidase IV type activity in the C-terminal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE-96149377; pubMed-8570628;

pharmacologic characteristics of a neuropeptidase.";
Proc. Natl. Acad. Sci. U.S.A. 93:749-753(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- FUNCTION: Also exhibits a dipeptidyl-peptidase IV type activity (By similarity). In vitro, cleaves Gly-Pro-AMC (By similarity).
-!- CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ALTERNATIVE SPLICING.

          TISSUE SPECIFICITY: Expressed predominantly in the hippocampal region of the brain and in kidney. Lower levels in the ovary, testis and mandibular gland.

DOMAIN: The NAALADase activity is found in the central region, dipeptidyl peptidase IV type activity in the C-terminal.

SIMILARITY: BELONGS TO PETIDASE FAMILY M2BM.

CAUTION: There are amino acid differences between the sequence shown in fig.1 (Ref.1) and the sequence deposited in the databb (AF026380). The sequence from fig.1 shows only 3 conflicts between 1 and Ref.2. These are at AA positions 141, 240 and 287.
                                                                                                                                                                                                                                  activity.

activity.

ENZYME REGULATION: The NAALADase and are inhibited by quisqualic acid.

Type II membran

Chem. 274.8470-8483(1999).

Biol. Chem. 274.8470-8483(1999).

FUNCTION: Has N-acetylated-alpha-linked-acidic dipeptidase runchabase) activity. Also exhibits a dipeptidyl-peptidase (NAALADase) activity. In vitro, cleaves Gly-Pro-AMC.

CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal Chem. Catalylically from Ac-Asp-Glu or pteroyl-gamm glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamm
                                                                                                                                                                                                                                                                                                    putamen and superior colliculus.

DOMAIN: The NAALADase activity is found in the dipeptidyl peptidase IV type activity in the SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: Type II membrane protein (Potential). TISSUE SPECIFICITY: Highest expression in the testis. Also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CATALYTIC ACTIVITY: Release of an unsubstituted, C-terminal glutamyl residue, typically from Ac-Asp-Glu or pteroyl-gamma. COPACTOR: Zinc; Binds two ions per subunit. Required for NAALADase activity (By similarity).

SUBCELLULAR LOCATION: Type II membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DOMAIN: The NAALADase activity is found in th dipeptidyl peptidase IV type activity in the SIMILARITY: BELONGS TO PEPTIDASE FAMILY M28B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       similarity)
